1 Introduction

This Stormwater Management Report has been prepared by Exceed Engineering to satisfy the Northern Midland Council's requirements for stormwater detention for the proposed new multiple dwellings at this site.

1.1 Purpose and scope

The purpose of this report is to investigate, report and provide the design of site stormwater detention to meet the requirements of the On-Site Stormwater Detention Council Policy.

As the stormwater overland flow path will be directly to the road drain on Bulwer St the report has considered the 5% AEP storm event for sizing on-site detention (OSD) and the permissible site discharge (PSD).

2 Site and development details

2.1 Pre-development site conditions

The predeveloped site is defined as the site prior to the construction of the unit/townhouse. It is developed as a driveway and single garage, presumably for the adjacent house prior to its subdivision.

The site is 1150 m^2 in area, and falls slightly to the north at approx. 3%.

2.2 Developed site conditions

The site will be developed with three units and a shared concrete driveway. The units range from 137 m^2 to 153 m^2. The total impervious area of the site will be 838 m^2.

The proposed development will increase the site imperviousness from the new roof and driveway areas. It will concentrate rainfall into the proposed piped drainage and detention system resulting in an increase of peak stormwater flows.

6000	52.727	12.18	17.17	22.69	28.66	35.03	41.78

3.1.1 Design runoff coefficient

The runoff coefficient was calculated for the developed site as follows:

Category	Type	Area (m2)	Coefficient of Runoff
Impervious Area	Roofed Area	427	1
	Asphalt/Concrete Driveway	411	0.9
	Paved and other handstand		0.9
Pervious Area	Open Deck		0.5
	Garden/grass (from AS3500 5.4.6)	312	0.1
	Gravel or pervious paver		0.6
Undeveloped area	other		0.5
	Total site area	**1,150**	
	Input Check (has to be 0)	**0**	
	Weighted average runoff coefficient	**0.72**	

3.2 OSD design

Using 1,200 m^2 as the block area and the fraction impervious as 0.7, from the table in section 3.1 the Council Policy OSD minimum volume is **4.54 m^3.**

As the stormwater will be discharged to the road gutter via a kerb adapter, which is approximately the same level as the lowest (northern) end of the site, underground storage cannot be installed at this lowest end of the site. Thus all of the driveway cannot be connected to detention as it would not drain via gravity to the discharge point.

As such, underground detention can only be installed approximately half way up the driveway, where sufficient depth becomes available, and can thus only service the higher part of the site driveway. The two highest units will convey roof stormwater to the underground storage, while the lowest unit will have an aboveground tank storage.

The discharge orifices on the tanks have been adjusted to offset the fact that runoff on the lower access/driveway will not be altered. The detention with thus consist of:

- 4000L underground tank for top half of driveway and the top two units. This will consist of 14.2 m of DN600 blackmax storage pipe connected to a pit
- 1 x 1,500L aboveground tank on the bottom unit

3.3 PSD design

The Council Policy maximum PSD is **10.545 L/s.**

In order to achieve this PSD, the peak flow on the detained stormwater must be reduced via a discharge orifice. The table below summarises the calculation for the reduction in

peak flows required in order to meet this requirement:

	total site	driveway no detention	driveway + 2 roofs detention	1x roof	Garden /grass
Area (m2)	1150	211	490	137	312
Runoff coefficient	0.72	0.9	0.9	1	0.1
5% AEP design rainfall (mm/hr)		84	84	84	84
Peak flow (L/s)	18.67	4.44	10.29	3.20	0.73
Adjusted flow rate (L/s)	10.55	4.44	4.00	1.38	0.73

In order to reduce the top unit roofs and driveways to 4.0 L/s, using the following orifice discharge formula, the tank discharge orifices should each be 46 mm. Similarly the discharge orifice for the underground tank must also be 25 mm to reduce this flow to 1.38 L/s.

Note this is the minimum discharge orifice size for an OSD as per AS3500.3.

$$A_o = \frac{Q_{des}}{C_d\sqrt{2gH}}$$

C_d = Orifice Discharge Coefficient (0.6)

H = Depth of water above the centroid of the orifice (m)

A_o = Orifice area (m^2)

Q_{des} = Design discharge (m^3/s)

4 Maintenance requirements for system

The onsite detention and stormwater treatment system will require ongoing inspection and maintenance to ensure it is working correctly. Key inspection and maintenance requirements are below;

Item	Frequency
• General inspection of inlets and outlets for blockages and ensure OSD is working correctly. Mesh screen should be cleared and cleaned and replaced if damaged or worn. • OSD should remain empty unless rain event occurs. • All debris and blockages to be investigated and removed if OSD does not empty by itself.	Monthly
• Remove debris from roof guttering to limit debris entering OSD. • Trees dropping leaves and debris onto roof should be trimmed.	Six Monthly
• Every 10 years full inspection of OSD and components by registered plumber is required. Replacement of all elements that would not last until next inspection is required and should be included in maintenance schedule.	10 Years

5 Summary

The developed site will require onsite detention and low flow orifice to achieve the requirements of the Council's On-Site Detention Policy.

A hybrid system consisting of aboveground and underground tanks is proposed, in order to meet the Council's specified requirements for OSD volume and PSD, whilst having the constraint of limited fall between the site and the discharge point.

SCH01 WORKPLACE HEALTH & SAFETY NOTES

18/04/2023

FOR APPROVALS

GENERAL

1. THE FOLLOWING RISK MITIGATION NOTES HAVE BEEN PREPARED TO ADVISE THE 'PERSON CONDUCTING A BUSINESS OR UNDERTAKING' (PCBU) ON THE HEALTH AND SAFETY ASPECTS OF THE DESIGN IN ACCORDANCE WITH THE WORK HEALTH AND SAFETY ACT 2011 AND ARE PERTINENT TO ANY TIME WHEN THE BUILDING OPERATES AS A WORKPLACE.

2. THESE NOTES MAY NOT NECESSARILY ACCOUNT FOR ALL CONSTRUCTION, OPERATION, MAINTENANCE AND DEMOLITION PRACTICES AND SAFETY RISKS. INCLUSION OR EXCLUSION OF ANY ITEM DOES NOT ABSOLVE THE OWNER, CONTRACTOR, USER, MAINTAINER OR DEMOLISHER OF THEIR OBLIGATIONS TO UNDERTAKE APPROPRIATE RISK MANAGEMENT ACTIVITIES AND IT IS NOT AN ADMISSION THAT ANY ITEM BELOW IS THE RESPONSIBILITY OF THE DESIGNER.

3. ADDITIONAL GUIDANCE ON WORKPLACE HEALTH AND SAFETY IS PROVIDED IN THE FOLLOWING CODES OF PRACTICE, WHICH THE CONTRACTOR IS TO COMPLY WITH AS APPLICABLE:
   - "CONSTRUCTION WORK" (CP104);
   - "HOW TO MANAGE WORK HEALTH AND SAFETY RISKS" (CP112);
   - "MANAGING THE WORK ENVIRONMENT AND FACILITIES" (CP124);
   - "SAFE DESIGN OF STRUCTURES" (CP127).

4. FURTHER ADDITIONAL AND UPDATED CODES OF PRACTICE AND OTHER GUIDANCE MATERIALS FOR THE MINIMISATION OF RISKS TO WORKPLACE HEALTH AND SAFETY ARE MADE AVAILABLE PERIODICALLY FROM SAFE WORK AUSTRALIA (www.safeworkaustralia.gov.au) AND THE RELEVANT STATE SAFE WORKING AUTHORITIES AND SHOULD BE CONSULTED PRIOR TO WORKS COMMENCING ON SITE.

5. WHERE APPLICABLE, THE SPECIFIC RISKS ASSOCIATED WITH THIS PROJECT HAVE BEEN ASSESSED AND ARE SUMMARISED WHERE APPLICABLE, IN THE ATTACHED RISK ASSESSMENT / HAZARD IDENTIFICATION REPORTS.

6. IT IS THE CONTRACTOR'S RESPONSIBILITY TO IDENTIFY ALL ASSOCIATED RISKS OF THE CONSTRUCTION PROCESS AND TO PREPARE ADEQUATE SAFE WORK METHOD STATEMENTS AND JOB SAFETY ANALYSIS.

7. TEMPORARY STRUCTURES AND CONTRACTOR ERECTION PROCEDURES ARE ONLY INDICATED WHERE ESSENTIAL TO THE EXECUTION OF THE DESIGN AS INTENDED IN THE DOCUMENTS PROVIDED. DETAILED PROCEDURES MUST BE SOUGHT PRIOR TO WORKS COMMENCING. FOR ALL ASSOCIATED TEMPORARY STRUCTURE OR ERECTION DESIGN AND CERTIFICATION THE CONTRACTOR IS TO ENGAGE A THIRD PARTY TO ASSIST, CERTIFY AND OVERSEE THE ERECTION OF THE WORKS.

SITE

RUPTURE OF SERVICES DURING EXCAVATION FOR OTHER ACTIVITY CREATES A VARIETY OF RISKS INCLUDING RELEASE OF HAZARDOUS MATERIAL. EXISTING SERVICES MAY BE LOCATED ON OR AROUND THE BUILDING SITE. WHERE KNOWN, THESE ARE IDENTIFIED ON THE DRAWINGS; HOWEVER THE EXACT LOCATION AND EXTENT OF SERVICES MAY VARY FROM THAT INDICATED. SERVICES SHOULD BE LOCATED USING AN APPROPRIATE SERVICE, APPROPRIATE EXCAVATION PRACTICE SHOULD BE USED AND, WHERE NECESSARY, SPECIALIST CONTRACTORS SHOULD BE ENGAGED.

SITE ACCESS / TRAFFIC MANAGEMENT:

1. THE CONTRACTOR IS TO CONDUCT WORKS IN ACCORDANCE WITH THE CODE OF PRACTICE: "TRAFFIC MANAGEMENT IN WORKPLACES" STANDARD CONTROL.

2. ESPECIALLY FOR BUILDINGS ON A MAJOR, NARROW, OR STEEPLY INCLINED ROAD: PARKING OF VEHICLES OR LOADING / UNLOADING OF VEHICLES ON THE ROADWAY MAY CAUSE A TRAFFIC HAZARD. DURING CONSTRUCTION, MAINTENANCE OR DEMOLITION OF THE BUILDING, DESIGNATED PARKING FOR WORKERS AND LOADING AREAS SHOULD BE PROVIDED. WHERE APPLICABLE, A TRAFFIC MANAGEMENT PLAN SUPERVISED BY TRAINED TRAFFIC MANAGEMENT PERSONNEL SHOULD BE IMPLEMENTED FOR THE WORK SITE.

3. PUBLIC ACCESS TO CONSTRUCTION AND DEMOLITION SITES AND TO AREAS UNDER MAINTENANCE CAUSES RISK TO WORKERS AND THE PUBLIC. WARNING SIGNS AND SECURE BARRIERS TO UNAUTHORISED ACCESS SHOULD BE PROVIDED. WHERE ELECTRICAL INSTALLATIONS, EXCAVATIONS, PLANT OR LOOSE MATERIALS ARE PRESENT, THEY SHOULD BE SECURED WHEN NOT FULLY SUPERVISED.

4. BUILDING OWNERS AND OCCUPIERS SHOULD MONITOR THE PEDESTRIAN ACCESS WAYS AND, IN PARTICULAR, ACCESS TO AREAS WHERE MAINTENANCE IS ROUTINELY CARRIED OUT, TO ENSURE THAT SURFACES HAVE NOT MOVED OR CRACKED SUCH THAT THEY BECOME UNEVEN AND PRESENT A TRIP HAZARD. SPILLS, LOOSE MATERIAL, STRAY OBJECTS OR ANY OTHER MATTER THAT MAY CAUSE A SLIP OR TRIP HAZARD SHOULD BE CLEANED OR REMOVED FROM ACCESS WAYS.

5. CONTRACTORS SHOULD BE REQUIRED TO MAINTAIN A TIDY WORK SITE DURING CONSTRUCTION, MAINTENANCE OR DEMOLITION TO REDUCE RISK OF TRIPS AND FALLS IN THE WORKPLACE. MATERIALS FOR CONSTRUCTION OR MAINTENANCE SHOULD BE STORED IN DESIGNATED AREAS AWAY FROM ACCESS WAYS AND WORK AREAS.

6. CONSTRUCTION OF BUILDING ELEMENTS THAT ARE NECESSARY TO CONTRIBUTE TO SAFE ACCESS TO THE BUILDING, SUCH AS HANDRAILS, SCAFFOLDING, ACCESS STAIRS, FALL ARREST SYSTEMS ETC., MUST TAKE PLACE PRIOR TO PROGRESSING WITH ANY OTHER WORKS FOR WHICH THOSE ELEMENTS WILL BE REQUIRED.

WATER:

IF THE BUILDING SITE IS ADJACENT TO ANY BODY OF WATER ADEQUATE PROTECTION AND ACCESS PREVENTION SHALL BE PROVIDED. THE CONTRACTOR IS TO PREPARE A SAFE WORK METHOD STATEMENT FOR ANY WORKS REQUIRED TO BE UNDERTAKEN OVER WATER.

LIGHTING AND VENTILATION:

THE CONTRACTOR IS TO PROVIDE ADEQUATE LIGHTING AND VENTILATION TO ALL AREAS REQUIRED TO BE OCCUPIED BY WORKERS DURING CONSTRUCTION. PRIOR TO THE COMMISSIONING OF THE BUILDING, FINAL LIGHTING AND VENTILATION MUST BE PROVIDED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NCC.

FIRE AND EMERGENCY:

ADEQUATE SITE SPECIFIC FIRE EQUIPMENT AND EMERGENCY EVACUATION PROCEDURES ARE TO BE PROVIDED AND MAINTAINED BY THE CONTRACTOR DURING WORKS ONSITE ACCORDING TO A SAFE WORK METHOD STATEMENT TO BE PREPARED BY THE CONTRACTOR PRIOR TO WORKS COMMENCING ONSITE. PRIOR TO THE COMMISSIONING OF THE BUILDING, FINAL FIRE PROTECTION EQUIPMENT SHALL BE PROVIDED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NCC.

1. THE CONTRACTOR IS TO CONDUCT WORKS IN ACCORDANCE WITH THE CODES OF PRACTICE: "WORKING IN THE VICINITY OF OVERHEAD AND UNDERGROUND ELECTRIC LINES" AND "MANAGING ELECTRICAL RISKS IN THE WORKPLACE" (CP117) AND AS3012 STANDARD CONTROLS.

2. UNDERGROUND POWER LINES MAY BE LOCATED IN OR AROUND THE SITE. ALL UNDERGROUND POWER LINES MUST BE ACCURATELY LOCATED AND EITHER DISCONNECTED OR ADEQUATE EXCLUSION ZONES DELINEATED PRIOR TO ANY CONSTRUCTION, MAINTENANCE OR DEMOLITION WORK COMMENCING.

3. OVERHEAD POWER LINES MAY BE LOCATED ON OR NEAR THE SITE. THESE POSE A SIGNIFICANT RISK IF STRUCK OR APPROACHED BY LIFTING DEVICES OR OTHER PLANT AND PERSONS WORKING ABOVE GROUND LEVEL. WHERE THERE IS A DANGER OF THIS OCCURRING, POWER LINES SHOULD BE, WHERE PRACTICAL, DISCONNECTED OR RELOCATED. WHERE THIS IS NOT PRACTICAL, CLEARLY IDENTIFIED EXCLUSION ZONES AND APPROACH DISTANCES SHALL BE ESTABLISHED AND MAINTAINED.

EXCAVATION

1. THE CONTRACTOR IS TO CONDUCT WORKS IN ACCORDANCE WITH THE CODE OF PRACTICE: "EXCAVATION WORK" (CP107) STANDARD CONTROL.

2. CONSTRUCTION OF THE BUILDING AND SOME MAINTENANCE ON THE BUILDING MAY REQUIRE EXCAVATION AND INSTALLATION OF ITEMS WITHIN THE EXCAVATION. WHERE PRACTICAL, INSTALLATION SHOULD BE CARRIED OUT USING METHODS THAT DO NOT REQUIRE WORKERS TO ENTER THE EXCAVATION. WHERE THIS IS NOT PRACTICAL, ADEQUATE SUPPORT FOR THE EXCAVATED AREA SHALL BE PROVIDED TO PREVENT COLLAPSE. WARNING SIGNS AND BARRIERS TO PREVENT ACCIDENTAL OR UNAUTHORISED ACCESS TO ALL EXCAVATIONS SHALL BE PROVIDED.

3. ANY AUGERING PROCEDURES MAY CAUSE A RISK OF FALLING INTO OPEN BORES. ALL BORES THEREFORE ARE TO BE CONCRETE FILLED AS SOON AS POSSIBLE. IN THE MEANTIME, ADEQUATE PROTECTION AND ACCESS PREVENTION SHALL BE PROVIDED.

4. THE CONTRACTOR IS TO CONSULT ANY SITE INVESTIGATION REPORTS ETC. BEFORE CONDUCTING ANY EXCAVATION WORKS. IN THE CASE OF ANY AREAS BEING IDENTIFIED AS HAVING GROUND CONTAMINATION PRESENT, A QUALIFIED SPECIALIST CONSULTANT SHALL BE ENGAGED TO PROVIDE REMEDIAL WORKS DESIGN AND RISK MITIGATION STRATEGIES.

Dear Stephen,

Additional Information Required for Planning Application PLN-23-0042
Multiple Dwellings x 3 (3 New) including Demolition of Existing Shed (Staged) at 17 Bulwer Street, Longford

Thank you for your application. The following additional information is required.

- The submitted site plan indicates fencing/privacy slats within 4.5m of the frontage. Provide a copy of fencing/screening elevations.

- The retaining wall and proposed dwellings are located within 1.5m of the side (east) and rear (south) boundaries and do not meet A3 of Clause 8.4.2. Therefore, provide a planning scheme response demonstrating compliance with P3. Please note that shadow diagrams may also need to be provided to assist in your response.

- Provide an amended site plan clearly showing and delineating an area of minimum 60m^2 of private open space for each dwelling as required under clause A1 of clause 8.4.3, or alternatively provide a planning scheme response demonstrating compliance with P1.

- Provide an amended site plan with dimensions demonstrating that the northern edge of the private open space of dwelling 2 and dwelling 3 is at least 3.0m south of the dwelling to the north of the private open space, or alternatively provide a planning scheme response demonstrating compliance with P1 of clause 8.4.4.

- Provide a written planning scheme response demonstrating compliance with P1 of clause 8.4.7 in relation to the proposed fencing within 4.5m of the frontage.

- Provide an updated site plan with the provision of one (1) Visitor Car Parking space in accordance with Table C2.1, or provide a written planning scheme response demonstrating compliance with P1.2 of clause C2.5.1.

- The subject site is located within the Longford Specific Area Plan and to meet A1 of clause NOR-S6.7.1 the residential density of multiple dwellings must be not less than 400m^2 per dwelling. Provide a written planning scheme response demonstrating compliance with P1 (a) of clause NOR-S6.7.1.

- Provide updated elevations demonstrating compliance with A1 of clause NOR-S6.7.2, or alternatively provide a written planning scheme response demonstrating compliance with P1 of clause NOR-S6.7.2.

- As wall materials are to be visible when viewed from the road, provide updated elevations and a written planning scheme response demonstrating compliance with P1 of NOR-S6.7.3, noting that Hardies Scyon Axon cladding does not appear to meet P1.

- Elevations provided do not clearly demonstrate that A1 of NOR-S6.7.4 has been met. Amended elevations are required to clearly demonstrate that window heads in all buildings are a minimum 300mm below the eaves line, noting there is no performance criteria.

- It would seem that some of the proposed new building windows will be partly visible when viewed from public spaces (particularly at an angle) and therefore a planning scheme response must be provided demonstrating compliance with P3 of NOR-S6.7.4.

- Your proposal has been referred to TasWater and Council's Works & Infrastructure Department, and should either require additional information you will be advised in due course.

This information is required under section 54 of the *Land Use Planning and Approvals Act* 1993. In accordance with section 54 (2) of the Act, the statutory period for determining the application will not recommence until the requested information has been satisfactorily supplied.

Dear Stephen,

Additional Information Required for Planning Application PLN-23-0042
Multiple Dwellings x 3 (3 New) including Demolition of Existing Shed (Staged) at 17 Bulwer Street, Longford

Thank you for your additional information received 22 March 2023. The following additional information remains outstanding:

- The submitted site plan indicates fencing/privacy slats within 4.5m of the frontage. Provide a copy of fencing/screening elevations. **Satisfied 22 March 2023.**

- The retaining wall and proposed dwellings are located within 1.5m of the side (east) and rear (south) boundaries and do not meet A3 of Clause 8.4.2. Therefore, provide a planning scheme response demonstrating compliance with P3. Please note that shadow diagrams may also need to be provided to assist in your response. **Partly satisfied 22 March 2023, although the retaining wall has been removed, the proposed dwellings located 1.0m from the east and south boundaries does not meet A3 of Clause 8.4.2. A written response demonstrating compliance with P3 is required.**

- Provide an amended site plan clearly showing and delineating an area of minimum 60m^2 of private open space for each dwelling as required under clause A1 of clause 8.4.3, or alternatively provide a planning scheme response demonstrating compliance with P1. **Satisfied 22 March 2023.**

- Provide an amended site plan with dimensions demonstrating that the northern edge of the private open space of dwelling 2 and dwelling 3 is at least 3.0m south of the dwelling to the north of the private open space, or alternatively provide a planning scheme response demonstrating compliance with P1 of clause 8.4.4. **Satisfied 22 March 2023.**

- Provide a written planning scheme response demonstrating compliance with P1 of clause 8.4.7 in relation to the proposed fencing within 4.5m of the frontage. **Not yet satisfied. Further justification is required to demonstrate compliance with the performance criteria, particularly subclauses (a) and (b).**

- Provide an updated site plan with the provision of one (1) Visitor Car Parking space in accordance with Table C2.1, or provide a written planning scheme response demonstrating compliance with P1.2 of clause C2.5.1. **Satisfied 22 March 2023.**

- The subject site is located within the Longford Specific Area Plan and to meet A1 of clause NOR-S6.7.1 the residential density of multiple dwellings must be not less than 400m^2 per dwelling. Provide a

written planning scheme response demonstrating compliance with P1 (a) of clause NOR-S6.7.1. **Not yet satisfied. Further justification is required to demonstrate compliance with the performance criteria, particularly subclause (a).**

- Provide updated elevations demonstrating compliance with A1 of clause NOR-S6.7.2, or alternatively provide a written planning scheme response demonstrating compliance with P1 of clause NOR-S6.7.2. **Satisfied 22 March 2023.**

- As wall materials are to be visible when viewed from the road, provide updated elevations and a written planning scheme response demonstrating compliance with P1 of NOR-S6.7.3, noting that Hardies Scyon Axon cladding does not appear to meet P1. **Not yet satisfied. Amended elevations are required to ensure that wall materials meet P1.**

- Elevations provided do not clearly demonstrate that A1 of NOR-S6.7.4 has been met. Amended elevations are required to clearly demonstrate that window heads in all buildings are a minimum 300mm below the eaves line, noting there is no performance criteria. **Not yet satisfied. The written response received 22 March 2023 details that all windows comply except for the garage window. As there is no corresponding performance criteria, all windows must meet the acceptable solution, therefore confirmation/ amended elevations are required to ensure compliance.**

- It would seem that some of the proposed new building windows will be partly visible when viewed from public spaces (particularly at an angle) and therefore a planning scheme response must be provided demonstrating compliance with P3 of NOR-S6.7.4. **Not yet satisfied. Although a 1.8m high fence is proposed around many windows, the fence is still lower than the total height of a number of windows when measured from ground level, and therefore a number of windows, or part thereof will be potentially partly visible when viewed from public spaces, over the top of the fencing. Provide a planning scheme response demonstrating compliance with P3 of NOR-S6.7.4.**

- **Council's Works & Infrastructure Department require the following additional information after reviewing your application:**

  Council's stormwater modelling indicates there are capacity issues in the downstream stormwater system. Please provide stormwater design plans and calculations prepared by a suitably qualified person on accordance with Council's onsite stormwater detention policy.

This information is required under section 54 of the *Land Use Planning and Approvals Act* 1993. In accordance with section 54 (2) of the Act, the statutory period for determining the application will not recommence until the requested information has been satisfactorily supplied.

Additional Information Required for Planning Application PLN-23-0042
Multiple Dwellings x 3 (3 New) including Demolition of Existing Shed (Staged) at 17 Bulwer Street, Longford

- Fence details are now shown on site plan.
- Retaining wall has been deleted, floor level has been raised.
- Open outdoor areas have now been delineated on site plan.

- **P1 8.4.4** In relation to loss of sunlight to the open outdoor area, this will be minimal.

There is significant over all distance between the North face of unit 3 and the South face of unit 2 - and also the North face of unit 2 to and South face of unit 1, approximately 6.5 meters.

The slope of the land, rising to the South, and the fact that the rooves of the units to the North, in each case, fall away to the South will minimize any shadowing.

In fact it will not add that much more shade than the 2100 mm high fence will create.
Also, there will be ample direct sunlight from the North East in the morning and the North West in the afternoon.

- P1 8.4.7 Fence design has been added to site plan.

Received
22.03.2023

Visitor parking.

We would like to propose that allowing visitor parking to be on the street.
Its quite a wide with long distances between crossovers on both sides of the street so there is ample availability for parking in close proximity to the site.

The area that would be used to park is not likely to change over time.

Its is not a main road so would be quite safe for street parking etc.

It would be possible to decrease the area of unit 1 to allow for parking but I believe that using that are of outdoor space of for the occupants would be a much better use of the space,

Received
22.03.2023

Area of site

The area of land does fall just short of the 1200 m2 required as its only 1150 m2.
It is only just under, and I feel it is compatible with the existing developments in the area.

P1 NOR - S6.7.1

In relation to this requirement, I do not believe the roof design will detract from the existing streetscape.

Several other houses in the street have gables facing the sides with a sloping plane toward the street. some in metal.

The front unit , most visible, is a significant distance from the front boundary, approximately 8.5 meters

While its not quite a traditional roof as shown in the diagrams in Figure NOR- S6.7.2 A1,
the split roof it is quite some distance from the front and not overly visible.

P1 NOR - S6.7.3

In regards to cladding, there is only a small portion of the walls that are not brick veneer.
If the vertical cladding is deemed unacceptable, we could change it to a cement weatherboard product if necessary.

P1 NOR - S6.7.4

All windows , other than the garage window, are more than 300 mm from the eaves.

1.8 meter high fences have been added to units 1 and 2.

Yours Sincerely
Stephen Lawes

As of July 1 2022, TasWater's Sub-Metering Policy no longer permits TasWater sub-meters to be installed for new developments. Please ensure plans submitted with the application for Certificate(s) for Certifiable Work (Building and/or Plumbing) reflect this. 16 Lewis Street,
Longford,
Tasmania, 7301.

To the General Manager, NMC. Reference number PLN-23-0042.

Dear Sir,

I recently received notice of a planning application for three new units that have been proposed to be placed on a block at 17 Bulwer Street, Longford. The said block is directly behind my block. I don't have any issues with that at this moment, but what I would like to know, firstly, is why the council puts in new kerbing and guttering before a planning application is made for any new buildings? Has a decision already been made for the applicant to go ahead with the construction of these three units. (The downloaded paperwork has two addresses on it, one for 17 Bulwer, and another for 19 Bulwer? I believe the block had been subdivided previously) The council never sends an representatives to nearby residents for consultation, and no one I know of has ever spoken to the person who has put in the planning application.
Secondly, within an area of less than 300 square metres there are presently 35 units in Lewis Street, Tasmania Street and Bulwer Street, with another 5 to be built. (Two at 20 Lewis, and the 3 at 17 Bulwer Street). Good luck to the Refuse truck drivers try to navigate all those rubbish bins. As an example just look at 15 Lewis Street, 18 units = 36 bins on the street every second Thursday, all about 300mm apart. I have seen the truck driver get out to make room for the arm to pick up the bins. Some of the bins stay out for over a week?

From previous experience it is a waste of time going to a NMC meeting, as decisions on new planning applications have already been decided prior to that particular meeting. I noticed on the card that was sent to me that I 'may appeal if I disagree with the Council's decision'. I will have to look that up one day.

One more thing: regarding footpaths in Longford. In most streets south of High Street that run in an East/ West direction, hardly anyone walks on a footpath, they use the street. Joggers, walkers, dog walkers, pram pushers, everyone walks on the street.

Dear Planner,

Re: Proposed multiple dwellings at 21 Union Street, Longford

The subject site at 21 Union Street, Longford (Title Reference: 36636/26, PID: 6737492) is the location of an existing dwelling constructed in 1977. The existing 96m2 dwelling has a low pitched corrugated iron gable roof, horizontal weatherboard cladding with shingle cladding extending from ceiling height up into the gable. At the rear of the existing dwelling is a more recent timber framed and polycarbonate attached pergola and to the left of the dwelling is a steel clad double car shed.

The proposed development is for change of use from single dwelling to multiple dwellings with a new 3 bedroom unit and new proprietary shed behind the existing dwelling. The proposed shed is to be allocated to the existing dwelling, being Unit 1, for parking and is setback 3.15m from the side boundary maintaining the existing side setback of the existing dwelling. The proposed new Unit 2 has been designed to be complimentary to the heritage precinct with layout, colours, profiles and materials proposed to be sympathetic to the existing dwelling, the neighbouring properties and the heritage precinct. The proposed Unit 2 is setback no less than 4m from both side boundaries and more than 2.8m from the rear boundary for the length of 4.2m and greater than 4m for the remainder. The setback from the side and rear boundaries provides opportunities for landscaping and planting.

Site Specific Study for 21 Union Street, Longford
Multiple Dwellings (1 Existing, 1 New)

Within the 500m Attenuation Distance of the JBS Abattoir and the 300m Attenuation Distance of the Koppers Wood Products processing works

Response to Planning Scheme provisions of Code E11-
Environmental Impacts and Attenuation Code, Clause E11.6.1 (P1):

P1 Sensitive use or subdivision for sensitive use within an attenuation area to an existing activity listed in Tables E11.1 and E11.2 must demonstrate by means of a site specific study that there will not be an environmental nuisance or environmental harm, having regard to the:

a) degree of encroachment:

How close is the emitting operation?

Approximately Abattoir: 420m, Koppers' Wood Products: 300m .

What is between the subject site and the emitting operation?

One existing house, a 110m wide open undeveloped block, Koppers Wood Products log yard, 2 other commercial premises, with large sheds, 2 streets and the railway line – see map attached below.

b) nature of the emitting operation being protected by the attenuation area:

What emissions does the operation produce? (noise and odours etc).

Noise: External refrigeration plant, ventilation fans and similar industrial noise, cattle trucks, refrigerated delivery trucks, log trucks, forklifts.
Odour: Cattle yards, fugitive emissions from the rendering plant, low level fugitive wood treatment chemical fume emissions

Are these emissions prevalent at this site?

No. There is sufficient distance and barriers such as buildings and trees to moderate the emissions to relatively low levels with infrequent occasional higher peaks during unfavourable weather.

If so, how do the emissions affect the subject site?

na

Exhibited

degree of hazard or pollution that may emanate from the emitting operation:

Are the emission produced having negative effects on the site?

No. Occasional low level occurrences only, as described above.

Is the degree of impact at the site increased, lessened or the same as a result of the structure?

No effect.

c) the measures within the proposal to mitigate impacts of the emitting activity to the sensitive use:

Are there any manmade or natural buffers offered on site, or in the surrounding area, that may reduce the impact of the emitting operation? (i.e. distance of residential development between the subject site and emitting operation)

Yes. Distance, buildings, trees, gardens etc as described above. The existing house provides additional shielding (especially of noise) to the proposed new dwelling, which will be located at the rear of the block.

1 Introduction

This Stormwater Management Report has been prepared by Exceed Engineering to satisfy the Northern Midland Council's requirements for stormwater detention for the proposed new dwelling at this site.

1.1 Purpose and scope

The purpose of this report is to investigate, report and provide the design of site stormwater detention to meet the requirements of the On-Site Stormwater Detention Council Policy.

As the stormwater overland flow path will be directly to the road drain on Marlborough St the report has considered the 5% AEP storm event for sizing on-site detention (OSD) and the permissible site discharge (PSD).

2 Site and development details

2.1 Pre-development site conditions

The predeveloped site is defined as the site prior to the construction of the unit/townhouse. It is developed as a small single dwelling and shed on a 1020 m^2 residential lot.

The site has a minor fall of approx. 1.5% to the north.

2.2 Developed site conditions

The site will be strata titled with the existing dwelling retained on approx. 450 m^2 and a new townhouse constructed with a site area of approx. 331 m^2. There is a common concreted driveway/parking area of 238 m^2, so half of this has been allocated to the new unit, for a total site area of **450 m^2**.

The proposed development will increase the site imperviousness from the new roof and driveway areas. A single residence is proposed, with associated shared concrete driveway. The balance of the site will be garden and grass.

The development will concentrate rainfall into the proposed piped drainage and detention system by increasing the imperviousness of the site.

3 Stormwater design methodology

3.1 Council Policy provided limits

The Policy includes a table providing required PSD and OSD limits for a given block size and fraction impervious runoff coefficient combination.

3.1.1 Design runoff coefficient

The runoff coefficient was calculated for the developed site as follows:

Category	Type	Area (m2)	Coefficient of Runoff
Impervious Area	Roofed Area	160	1
	Asphalt/Concrete Driveway	119	0.9
	Paved and other handstand		0.9
Pervious Area	Open Deck		0.5
	Garden/grass (from AS3500 5.4.6)	171	0.1
	Gravel or pervious paver		0.6
Undeveloped area	other		0.5
	Total site area	**450**	
	Input Check (has to be 0)	**0**	
	Weighted average runoff coefficient	**0.63**	

3.2 OSD design

The site area used is 500 m^2, rounding up from the actual area of the new townhouse and half of the common driveway of 450 m^2. From above, the fraction impervious was chosen as 0.6 thus the Council Policy OSD minimum volume is **1.43 m^3.**

As the stormwater will be discharged to the road gutter via a kerb adapter, which is only approx. 200-300mm lower than driveway, under which the OSD would be installed, underground storage is not possible as it will not drain via gravity. As such, the only option to incorporate OSD is via aboveground tanks, however this will only harvest roof rainfall.

Accordingly, the discharge orifice has been adjusted to offset the fact that runoff on the access/driveway will not be altered. The storage volume of the tank is also increased to 2000L as this is a standard slimline tank size, however in longer duration storms, when the larger volume would typically be required, the peak flow rate is less than the PSD and thus there is no benefit to oversizing the storage.

3.3 PSD design

The Council Policy maximum PSD is **4.4 L/s.**

In order to achieve this PSD, the peak flow on the roof stormwater must be reduced via a discharge orifice. The table below summarises the calculation for the reduction in roof peak flow required in order to meet this requirement:

	Total site	Driveway / parking	Roof	Garden / grass
Area (m2)	450	119	160	171
Runoff coefficient	0.71	0.9	1	0.1
5% AEP design rainfall (mm/hr)		84	84	84
Peak flow (L/s)	4.4	2.50	3.74	0.40
Adjusted flow rate (L/s)	4.4	2.50	1.50	0.40

In order to reduce the roof flow rate to 1.50 L/s, using the following orifice discharge formula, the tank discharge orifice should be 23 mm. As per AS3500.3 the minimum orifice size for an OSD should be 25mm, so this is adopted.

$$A_o = \frac{Q_{des}}{C_d\sqrt{2gH}}$$

C_d = Orifice Discharge Coefficient (0.6)

H = Depth of water above the centroid of the orifice (m)

A_o = Orifice area (m^2)

Q_{des} = Design discharge (m^3/s)

4 Maintenance requirements for system

The onsite detention and stormwater treatment system will require ongoing inspection and maintenance to ensure it is working correctly. Key inspection and maintenance requirements are below;

Item	Frequency
• General inspection of inlets and outlets for blockages and ensure OSD is working correctly. Mesh screen should be cleared and cleaned and replaced if damaged or worn. • OSD should remain empty unless rain event occurs. • All debris and blockages to be investigated and removed if OSD does not empty by itself.	Monthly
• Remove debris from roof guttering to limit debris entering OSD. • Trees dropping leaves and debris onto roof should be trimmed.	Six Monthly
• Every 10 years full inspection of OSD and components by registered plumber is required. Replacement of all elements that would not last until next inspection is required and should be included in maintenance schedule.	10 Years

5 Summary

The developed site will require onsite detention and low flow orifice to achieve the requirements of the Council's On-Site Detention Policy.

As there is insufficient fall to install an inground OSD system, an above ground tank servicing the roof area has been designed, with an orifice to ensure that the required PSD is achieved.

Water Submetering

As of July 1 2022, TasWater's Sub-Metering Policy no longer permits TasWater sub-meters to be installed for new developments. Please ensure plans submitted with the application for Certificate(s) for Certifiable Work (Building and/or Plumbing) reflect this. For clarity, TasWater does not object to private sub-metering arrangements. Further information is available on our website (www.taswater.com.au) within our Sub-Metering Policy and Water Metering Guidelines.

Proposal- Multiple Dwellings (1 Existing,1 New) Local Heritage Precinct
Reference No; PLN-23-0057

Dear Sir/Madam,

We are writing to you again with our concerns about the above application which has been proposed to be built next door to our home at 23-25 Union Street in Longford which is a beautiful heritage listed home and property.

We are strongly opposing this revised application for many of the reasons we listed in our previous letter.
Firstly, just because you may have just enough m2 of vacant land you feel you can justify subdividing, doesn't mean you should. It feels like a money grab from an interstate developer with no connections to our beautiful town or any understanding of why families like us choose to live here.
Although the plans have changed as well as the style of the build we feel that any new build in our heritage precinct area will just not fit in and frankly not needed. As we stated in our previous letter there have been no other developments of this kind and it would be nice to keep our street the way it is. It is already a busy cut through street being the first right hand turn when you enter Longford. As well as being a popular street for children and walkers alike.

One of our biggest concerns remains and that is the impact this new build at 21 Union Street will have on our privacy. The trees and shrubs shown on the plans are not also covered and we have plans to relocate our wood shed closer to our house.
This new plan shows the unit being built much closer than the previous plan and our concerns about noise and privacy remain.

We still have concerns regarding the sewage and water and how this could impact our property, we have had so many issues, we can't see how this added property to our street won't put added pressure on these pipes!

We don't belive that every square inch of vacant land needs to be developed, it would be extremely disappointing to see this go ahead.

Warm Regards,

Shannon and Nicholas

Dear Planner,

Re: Representation received to Planning Application PLN-23-0057 – Multiple Dwellings (1 Existing, 1 New) and New Shed Including Demolition of Existing Outbuilding (C9.0 Attenuation, C6.0 Local Historic Heritage – Local Heritage Precinct, Longford SAP)

Thank you for the opportunity to respond to the representation against the application for Multiple Dwellings at 21 Union Street, Longford.

I would like to re-affirm that the application is substantially compliant with the planning scheme Use Standards and Development Standards acceptable solutions. Multiple Dwellings is a Permitted Use under the General Residential Zone. In particular, the application complies with the acceptable solution for residential density for multiple dwellings with a density of one dwelling per 509.5m2.

The design of the proposed dwelling has been carefully considered to be sympathetic to the Local Heritage Precinct. Each element which requires discretion has been carefully considered and minimised as much as practicable. Notably, the proposal achieves setbacks greater than the requirements of the planning scheme allowing for separation and landscaping between properties.

I would also like to clarify that the application is for multiple dwellings which are to be Strata divided in the future and is not an application for subdivision.

Kind regards

Bianca Pople
